DESCRIPTION

Faro lamps - a timeless, industrial style

The Faro lamp collection from the MiLAGRO brand is a real treat for lovers of the loft style. This series is distinguished primarily by lampshades. Their semicircular shape subtly exposes the light bulb inside. Therefore, it is worth treating this element as not only a light source, but also an important decorative element that gives the lamp an additional character. The lampshades are also distinguished by deliberately made abrasions, making the lamp look like lighting from several decades ago, which fits in the fashionable vintage trend. Hanging lamps are hung on a rectangular rosette, and the lines are entwined with a heavy chain - this is another distinguishing feature of the Faro collection lamps.

The Faro lamp line consists of three models that can be freely combined with each other and illuminate a selected place in the house or apartment. We can choose a pendant lamp with two or three light sources. The fact that you can freely adjust their height is a great help. Depending on our needs and the height of the room, it can be from 500 to 900 mm. The collection of Faro lamps is perfectly complemented by a wall lamp with one light source. This line will look great in spacious, industrial interiors. Raw brick, gypsum or decorative plaster will be especially favorable to her. Faro lamps fit very well in a space dominated by natural wood, as well as subdued earth colors, such as browns, greens and grays.

Collection of Faro lamps - attention to every detail

Only the highest quality materials were used to make the Faro line lamps: natural wood and black metal. The power of each light source is 60 W, and the voltage of the supply voltage is 230 V.

The stylish collection of Faro lamps includes the following models:

- hanging lamp with three light sources, black MLP6243
- hanging lamp with two light sources, black MLP6242
- wall lamp with one light source, black MLP6241
